EMPLOYMENT AND UNEMPLOYMENT

JULY 1976

ISTRALIAN IREAU OF SATISTICS

NBERRA

AUSTRALIAN BUREAU OF STATISTICS CANBERRA, AUSTRALIA

Reference No. 6.4

FOR RELEASE: NOON 21 OCTOBER 1976

EMPLOYMENT AND UNEMPLOYMENT, JULY 1976

This bulletin contains particulars of the numbers of employed wage and salary earners (referred to in the tables as "employees"), job vacancies registered and unemployed persons.

Seasonally adjusted statistics appear in Tables 1, 3 and 8-11. The methods used in seasonally adjusting these statistics are explained in Seasonally Adjusted Indicators, 1976 (Reference No. 1.10).

Preliminary estimates of employees are published each month in Employed Wage and Salary Earners: Preliminary (Reference No. 6.12).

NOTE. When using these figures, particular note should be taken of the comments on recent trends in the estimates outlined in paragraphs 2 and 3 on page 2.

NOTE. Inquiries concerning these statistics may be made in Canberra by telephoning Mr Joe Christensen on 52 6655 or, in each State capital, by telephoning the office of the Australian Bureau of Statistics.

I. EMPLOYED WAGE AND SALARY EARNERS

The figures in this section generally relate only to civilian wage and salary earners, not the total labour force: they therefore exclude employers, self-employed persons, unpaid helpers and the unemployed. Also excluded, because of the inadequacy of current data, are wage and salary earners in agriculture and private households employing staff. For the sake of brevity, wage and salary earners are referred to in the tables as "employees". Defence forces are included in Table 1.

- 2. In recent periods the monthly estimates of employed wage and salary earners and the estimates of employed persons derived from the quarterly population survey showed divergent trends. The two series are based on different methods of collection and estimation and the population survey estimates are subject to sampling variability; as a result the series have a number of occasions in the past exhibited different trends for short periods.
- 3. The monthly estimates for the private sector are based largely on data aggregated from payroll tax returns. Recent increases in the payroll tax exemption level have increased the proportion of employees in the unrecorded sector, and consequently the amount of estimation required. Also, the present employment environment, and the new PAYE taxation arrangements applying since 1 January 1976 may have had effects on the incidence of multiple jobholding and on the extent to which part-time and casual workers are being employed, with consequential effect on the basic data. An investigation of the estimates for recent months is continuing and they should therefore be regarded as subject to revision (which could possibly be substantial).
- 4. The data needed to derive the estimates for periods subsequent to the benchmark date (June 1971) are obtained from three main sources, namely, (a) current payroll tax returns; (b) current returns from government bodies; and (c) some other current returns of employment (e.g. for hospitals); the balance, i.e. unrecorded private employment, is estimated. At June 1971 recorded employment obtained from the foregoing sources accounted for about 90 per cent of the employees in the industries covered, as determined by the benchmarks.
- 5. The estimates in Tables 1 to 7, except those relating to government employees and defence forces, are based on comprehensive data (referred to herein as "benchmarks") derived for the purpose from the population census of June 1971 and other sources, (see paragraph 9). Month-to-month changes shown by current data (see paragraph 4) are linked to the benchmark data to derive the monthly estimates.
- 6. Although the series measure reasonably well the short-term trends in employment in the defined

field, they may be less reliable for longer-term measurement. There are conceptual differences between benchmark and current data, and changes in such factors as labour turnover, multiple jobholding and part-time working all affect the trend over longer periods.

Concepts and definitions

7. The concepts and definitions applicable to these estimates are those adopted at the 1971 population census, which conformed closely to the recommendations of the Eighth International Conference of Labour Statisticians. At the census the following questions were asked in respect of all persons fifteen years of age and over:

"Did this person have a full or part-time job, or business or farm of any kind last week (even if this person was temporarily absent from a job because of sickness, holidays, industrial dispute, etc.)?"

"Did this person do any work at all last week for payment or profit (even if this person was working only part-time or helping without pay in a family business)?"

Provided they had not been temporarily laid off by their employers without pay for the whole of the week, persons who answered "yes" to either of these questions were classified as employed. Persons in this category were classified as wage or salary earners if on their census schedule they were stated to be "a wage or salary earner" in the job they held in the previous week.

8. Government employees comprise not only administrative employees, but also all other employees of government bodies (Australian, State, local and semi-government) on services such as railways, road transport, banks, postal and telecommunications, air transport, education (including universities), radio and television, police, public works, factories departmental hospitals and institutions, etc.

Adoption of new benchmarks

- 9. As results from each successive population census become available it is customary to derive from them new benchmarks for the monthly employment series, and to revise the published estimates for all periods subsequent to the date of the previous census. Benchmarks for June 1971 were established by analysing data from the 1971 population census and other relevant sources such as special returns from government bodies and the Bureau's economic censuses and surveys.
- 10. For a number of reasons the estimates of employed wage and salary earners previously published for June 1971 differed from the corresponding figures obtained from the 1971 population census. The principal reasons for the differences are as follows:

- (a) there is an unavoidable accumulation of errors in the intercensal employment estimates, e.g. in the estimates of movements in unrecorded employment;
- (b) apart from the undercount to which population censuses are generally subject, evidence from census post-enumeration surveys indicates that the completion of census questionnaires by householders tends to identify a smaller number of persons as being in the labour force than do other methods of measurement (e.g. household surveys conducted by personal interview), and that components of the total labour force, such as employed wage and salary earners, tend to be affected in the same way;
- (c) estimated monthly movements in civilian employment are derived mainly from returns from employers relating to establishments or enterprises, but the population census figures are derived from particulars recorded by individuals on census schedules. The latter do not in all cases provide precise information to allow accurate coding of industry;
- (d) previously published estimates for June 1971 included about 7,000 male and 17,000 female trainee teachers who are not included in the new benchmarks or subsequent monthly estimates;
- (e) crews of overseas ships are excluded from the monthly employment estimates;
- (f) some persons are not enumerated in the census in the State or Territory in which they work, e.g. persons resident in New South Wales and working in the Australian Capital Territory and persons who at the time of the population census are on holidays interstate.
- 11. Population census data were not always accepted as a matter of course in determining the June 1971 benchmarks. The factors mentioned above were taken into account and particulars of employment obtained from other sources (see paragraph 9 above) were used in analysing and, where necessary, in revising the estimates. It should be noted that figures in this bulletin are subject to further revision as the results of later censuses and surveys become available.

Current data

12. Current data supplied by reporting enterprises or establishments generally refer to persons on the payroll for the last pay-period in each month. Persons

who are on paid leave or who work during part of the pay-period and are unemployed or on strike during the rest of the period are generally counted as employed. Those not shown on employers' payrolls because they are on leave without pay, on strike or stood down for the entire period are excluded.

13. In the States payroll tax returns are lodged at present by all employers paying more than \$800 a week in wages (other than certain Australian Government bodies, religious and benevolent institutions, public hospitals and other similar organisations specifically exempted under the Australian and State Payroll Tax Acts, 1971-1975). Up to the end of 1975, payroll tax returns were lodged by employers paying more than \$400 a week in wages. This level of \$400 a week still applies to employers in the Territories.

Industry

14. The industry classification used in this bulletin is the Australian Standard Industrial Classification (ASIC), described in the Bureau publication Australian Standard Industrial Classification (Preliminary Edition), 1969, Volume 1. This industry classification is not directly comparable with those adopted for population censuses before 1971 and used in previously published estimates of civilian employees.

Estimates for earlier periods

- 15. For the period June 1966 to June 1971 detailed industry figures for each State and Australia and the government employment series were published in two special bulletins (Reference No. 6.23) issued on 24 April 1970 and 11 January 1972. However, estimates by industry in those bulletins are not directly comparable with the estimates by industry contained in this bulletin, due to the adoption of ASIC, (see previous paragraph).
- 16. It is expected that in due course a revised series will be published for the period June 1966 to May 1971, classified according to ASIC. However it may not be possible to provide as much industry detail as for June 1971 and subsequent periods. ASIC estimates cannot be derived for periods prior to June 1966.

Symbols and other usages

- .. Nil or less than 50 persons
- r Figure or series revised since previous issue
- Break in continuity of series (where drawn across a column between two consecutive figures.)
 - † Affected by industrial disputes

Any discrepancies between totals and sums of components in tables are due to rounding.

⁽a) Includes persons employed in the Australian Capital Territory who reside in adjoining areas. (b) Excludes permanent defence forces. (c) Includes industrial as well as administrative employees, (see paragraph 8, page 2).

2. UNEMPLOYED PERSONS

The tables in this section contain (a) estimates of the total number of persons unemployed, derived from the quarterly population survey, (b) the numbers registered with the Commonwealth Employment Service as unemployed, and (c) the number in receipt of unemployment benefit.

Total Unemployed Persons : Population Survey Estimates

- 2. The quarterly population survey is carried out on a sample basis throughout Australia in February, May, August and November each year. Interviews are conducted during a period of four weeks in the State capital cities and two weeks in other areas. Particulars of the number of persons employed or unemployed, and of the total labour force, are published each quarter in a mimeographed bulletin *The Labour Force* (Reference No. 6.20).
- 3. For purposes of the survey, unemployed persons are defined as all civilians aged 15 years and over who either:
 - (a) during the survey week did not work and did not have a job, but could have taken one had it been available, and had been looking for full-time or part-time work in the four weeks up to and including the survey week (including persons who would have been prevented from taking a job in the survey week by their own temporary illness or injury, or by their having made arrangements to start after the survey week in a new job in which they would have preferred to start in the survey week) or
 - (b) were waiting to be called back to a job from which they had been temporarily stood down without pay for four weeks or less (including the whole of the survey week).
- 4. Unemployed persons therefore comprise those looking for full-time work, those looking for part-time work and those temporarily laid off from either full-time or part-time jobs. This definition of unemployed persons conforms closely to that recommended by the Eighth International Conference of Labour Statisticians, Geneva, 1954.
- 5. Since the estimates are based on a sample, they may differ from the figures that would have been obtained from a complete census using the same questionnaires and procedures. There are about two chances in three that the differences would be less than 4,000 for total unemployed males, less than 3,500 for total unemployed females and less than 5,000 for total unemployed persons, and about nineteen chances in twenty that they would be less than twice these figures. Further details about the survey and the reliability of estimates will be found in the quarterly bulletin The Labour Force (Reference No. 6.20).
- 6. The sample estimates will differ from the number of persons registered with the Commonwealth Employment Service (see Table 9) as not employed, awaiting placement in full-time employment, for a number of reasons, including the following:

- (a) the survey estimates include persons looking for part-time work as well as those looking for full-time work,
- (b) they exclude persons who did any work at all during the survey week, even though they may subsequently have become unemployed and registered with the Commonwealth Employment Service, or have done so little work as not to lose eligibility for unemployment benefit,
- (c) they represent averages over a period (see paragraph 2), whereas the numbers registered refer to a particular day,
- (d) they are subject to sampling variability (see paragraph 5),
- (e) they include some unemployed persons (particularly females) who do not register with the Commonwealth Employment Service, and
- (f) they exclude any persons registered as unemployed who find jobs but do not notify the Commonwealth Employment Service at once that they have done so.

Seasonally Adjusted Series

- 7. In the previous issue of this publication, mention has been made of the problems in seasonally adjusting numbers unemployed due to the change in the proportional relationship of the amplitude of the seasonal variations to the level of the quarterly series.
- 8. An estimate of the effect of the change in the relationship between the amplitude of the seasonal variations and the level of the quarterly series has now been made. Prior adjustment factors derived from this estimate have been used in the X-11 program to obtain improved seasonal adjustment factors. The estimate of the new relationship is necessarily based only on experience since late 1974. Although the problems in satisfactorily seasonally adjusting the quarterly series are less than would be the case with a monthly series, it would be claiming too much to suggest that the problems encountered previously have now been wholly overcome. However, the revised figures will provide a better seasonal adjustment than that provided previously.
- 9. The seasonal adjustment factors have been revised for both the "persons aged 15-19 years looking for their first job" and the "remainder" series. The following table therefore includes revised seasonally adjusted estimates for total unemployed.
- 10. As from the previous issue of this publication the unemployment estimates derived from the population survey have been based on a revised definition. See The Labour Force, May 1976 (Preliminary) (Reference No. 6.32), pages 1 and 2, paragraphs 6 to 12 for details. Estimates of unemployment on the revised basis have a different seasonal pattern from those on the old basis. Because only five quarterly figures on the revised basis were available at the time the seasonal adjustment factors were calculated it has been necessary to make special estimates for the seasonally adjusted series.

⁽a) Aged 15 years and over. For definition, see page 9. (b) The number of unemployed in each group as a percentage of the labour force in the same group. (c) Revised following re-analysis of the series. See page 9, paragraphs 7 to 10. See also note (c) to Table 5. (d) Because of the effects of cyclone Tracy the population survey was not conducted in Darwin in February 1975. The estimates for this period therefore exclude Darwin. It is estimated that at the time of the survey about 12,000 males and 5,000 females aged 15 years and over were living in Darwin. (e) The sample size was reduced for the November 1975 survey. Consequently the standard errors for estimates from that survey are larger than usual. For details see the November 1975 issue of The Labour Force (Reference No. 6.20). (f) Preliminary estimates, subject to revision.

^{††} Affected by the deferral of the interviewing period by one week. It is estimated that had interviewing taken place in the normal period, the seasonally adjusted figure for persons would have been higher by some 5,000 to 10,000.

⁽a) Comprises all persons who were still registered with the Commonwealth Employment Service (C.E.S.) at the Friday nearest the end of the month, who claimed when registering that they were not employed, and who were seeking full-time employment, i.e. 35 hours or more per week. They include persons referred to employers but whose employment was still unconfirmed, and persons who had recently obtained employment without notifying the C.E.S., all recipients of unemployment benefit are included. (see Table 11). (b) Includes the Australian Capital Territory. (c) Includes the Northern Territory. (d) See page 9 paragraphs 7 and 8 regarding the reliability of the estimates. See also note (c) to Table 5. (e) Not available.

⁽a) Number on benefit at Saturday nearest the end of the month until February 1976. The introduction of fortnightly payments in March 1976 has altered the basis of collection of numbers on benefits to four or six week accounting periods. Figures now show numbers on benefit at the dates indicated. (b) State and Territory classification is based on location of office from which payment of benefit is made. (c) See page 9 paragraphs 7 and 8 regarding the reliability of the estimates. See also note (c) to Table 5. (d) Figures for August 1974 are not strictly comparable with other months shown due to the introduction of new administrative procedures in April 1975. (e) Not available.

⁽a) Vacancies notified to the CES. which were still unfilled at the Friday nearest the end of the month and which employers claimed could be filled if labour were supplied immediately or within the following month. Vacancies for full-time, part-time, permanent, temporary and seasonal positions are included. (b) Includes the Australian Capital Territory. (c) Includes the Northern Territory. (d) See page, 9 paragraphs 7 and 8 regarding the reliability of the estimates. See note (c) to Table 5. (e) Not available.

NOTE. Sample surveys have been conducted by the Australian Bureau of Statistics in March each year since 1974 to obtain information on the level and composition of job vacancies. For a number of reasons the estimates obtained from these surveys differed substantially from the numbers of vacancies registered with the CES at those dates. For example, the survey estimate of total vacancies at March 1976 was 45,700, while the CES figure was 22,976. Results of the surveys and reasons why the survey estimates differ from CES statistics were published in Job Vacancies, March 1976 (Reference No. 6.58).
